UK & Middle East

01 / OVERVIEW

Your security operations, fully managed.

Attackers work around the clock while security teams are stretched thin. Our Managed SOC gives you a dedicated team of experienced analysts who monitor your environment, investigate every meaningful alert and act fast to contain threats, without the cost of running an in-house SOC.

Less noise

We filter and validate alerts so your team only hears about what truly matters.

Expertise on demand

A full analyst team without the effort of hiring, training and retaining one.

Faster response

Threats are confirmed and contained quickly, before they become breaches.

02 / COVERAGE

What we monitor

01

Endpoints & Servers

Workstations, servers and mobile devices, for malware, ransomware and fileless attacks.

02

Cloud

Public cloud workloads and services, for misconfigurations and suspicious activity.

03

Identity & Access

Compromised credentials, brute-force attempts and unusual sign-in behaviour.

04

Network

Traffic and flow analysis to spot lateral movement and command-and-control.

05

Email

Phishing and malicious attachments, linked to endpoint and identity activity.

06

Firewalls & Applications

Security devices, business applications and the other log sources you rely on.

COVERAGE MODELS

24/7	12/7	8/5	Custom
365 DAYS	7 DAYS / WEEK	WEEKDAYS	YOUR NEEDS

Why Cyber360

01 **Trusted since 2003**
02 **80+ years of expertise**
03 **Skilled, certified analysts**
04 **Local and global reach**
05 **Vendor-agnostic advice**
06 **Outcome-based approach**

03 / SERVICES

What we do for you.

01

Security Monitoring & Alert Triage

Analysts watch your environment and triage every alert, separating real threats from noise.

02

Threat Detection & Correlation

Behavioural analytics and correlation across all sources reveal attacks a single tool would miss.

03

Incident Investigation

Every confirmed threat is investigated to establish root cause, scope and impact.

04

Active Response & Containment

Isolating affected systems and neutralising threats, under agreed response playbooks.

05

Proactive Threat Hunting

Analysts search for hidden attacker activity before it triggers an alert.

06

Reporting & Compliance

Clear reports, dashboards and log retention that support audits and regulation.

How it works

FROM ALERT TO RESOLUTION

1 **Onboard**

Connect your log sources and tune detections to your environment.

2 **Detect**

Analytics and correlation flag suspicious activity as it happens.

3 **Investigate**

Analysts triage, confirm and scope each threat.

4 **Respond**

Contain the threat and guide remediation with your team.

5 **Report**

Summaries of what happened, actions taken and next steps.

What you get

- Dedicated onboarding and use-case tuning
- Containment guidance and remediation support
- Monthly service reports and reviews
- Immediate escalation of critical incidents
- Clear incident summaries with actions taken
- Executive dashboards and audit-ready reporting

Let’s secure your business.
