TRAVEL RISK PROGRAM (TRIP)

Business executives have access to highly-sensitive confidential and proprietary information. When traveling, executives may become victims of cyber-attacks, cybercrime, or surveillance. The risks are compounded in countries with strong competition, civil unrest, or a prevalence of crime. Be it an unsecured wireless network, a computer seized at the border, or a laptop left in a hotel room, there are significantly elevated risks of data theft or malware installation. While data security is a challenge, there are defenses to help mitigate these risks.

Automated   **Powerful**   **Visible**

With TRIP, information security teams can better understand the state of their sensitive data and risk posture on endpoints before and after travel activities.
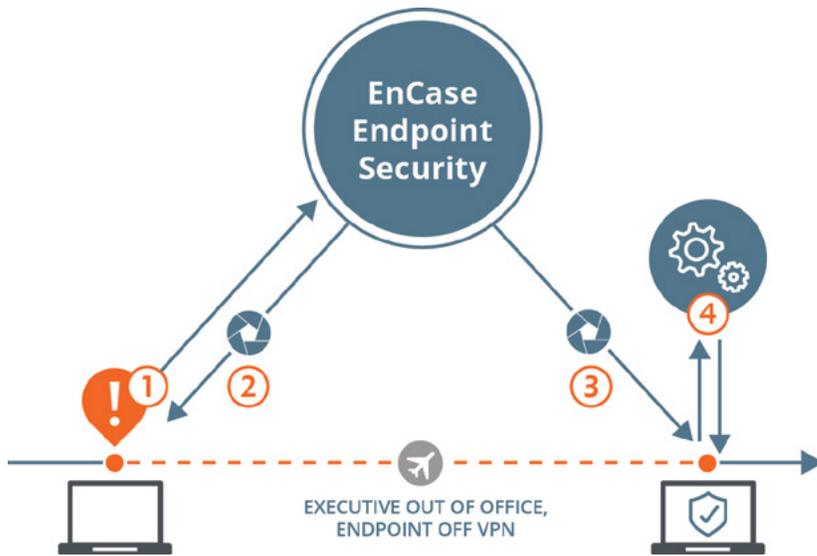

How it works

1 An alert from your travel management system notifies EnCase Endpoint Security of upcoming travel for select employees

2 Prior to travel, critical data regarding the employee's device is automatically captured

3 When the device returns to the network, another image is immediately taken

4 The two states are automatically compared, and any differences or anomalies are compiled in a report for additional review

---

With this service, our experts will integrate EnCase Endpoint Security directly with your existing travel management system. We will then configure the software to automatically evaluate critical endpoints prior to travel and immediately upon return, accounting for possible changes or anomalies that may have occurred during that time. EnCase Endpoint Security then generates a comprehensive report for further evaluation by incident responders and/or investigators, if needed.

THE TRAVEL RISK PROGRAM ALLOWS TEAMS TO:

- Provide an extra layer of protection for mobile employees
- Detect threats introduced while off the network
- Speed investigations through automated workflows and processes
- Allow for quick and effective remediation to return endpoints to a trusted state

TOP ORGANIZATIONS THAT HAVE IMPLEMENTED TRIP:

Bank of America

MAYO CLINIC

ENCASE ENDPOINT SECURITY IS THE MARKET-LEADING ENDPOINT DETECTION AND RESPONSE TOOL TRUSTED BY FORTUNE 500 ORGANIZATIONS & GOVERNMENT AGENCIES ALIKE.

ENCASE ENDPOINT SECURITY:

Offers organizations 360° visibility into all of their endpoints and operating systems across the enterprise

Detects unknown threats and zero-day attacks

Automates the incident response process by validating and triaging incoming alerts from perimeter detection tools

Completely responds to an incident and any affected systems with complete forensic remediation
